GREAT SELECTION

Early orders and contract growing available.

Friends and Customers—

Anne and I have decided to scale down the size of our nursery heading into 2022.
We will be growing fewer varieties and quantities.
As a result, our delivery territory is much reduced.
Please call or email to inquire if we can service your business.
Those outside of our area are welcome to place an order and pick up with their own truck.
We'll still be growing a good amount of the same
native and ornamental perennials and grasses that you have been relying on,
we just aren't growing for the northern market any longer.
Our hours are 7am-4pm, Monday through Friday, closed Saturdays.
Because of the smaller staff, we will now be closed for lunch
between 12 noon until 1pm.

✿

HOURS: Monday through Friday, 7:00am - 4:00pm; closed 12-1p for lunch

LOCATION: We are in the Bennetts Creek area of Northern Suffolk near Lancaster Farms. This area is convenient to I-64, I-664 and the James River Bridge.

DELIVERY: We make deliveries in our own trucks to limited areas of Virginia and North Carolina. Call us for a quote.

TERMS: Since we sell wholesale only and offer our plants at reasonable prices, our terms are cash payment with each order. For customers who establish credit, payment is due ten (10) days from pickup or delivery. Accounts over thirty (30) days will accrue a service charge of 1.5% monthly or 18% annually.

CONTRACT GROWING: If there is plant material that you require that differs in size or variety from what we offer, give us the opportunity to do contract growing for you. Your order is grown away from our general inventory assuring you that your order will be on hand when you need it.

armandii 'Snowdrift'- *This hard-to-find clematis is a fragrant evergreen climber with masses of 3" white flowers in spring. Full sun to part shade.* (1 GALLON) 22.50

CLEMATIS PRUNING GROUP

Group One: This group blooms only on wood grown the previous season then ripened in Autumn. Pruning should be done immediately after flowering. Includes all small flowered varieties and Evergreens.

Group Two: Large flowered types which bloom on previous seasons' ripened stems. To prune, remove weak and dead stems and make corrective pruning in summer when needed.

Group Three: All types which produce flower on new wood. To prune, do a February cleanup on this group, cutting stems back down close to ground where a strong axil bud occurs, hopefully just above the previous years' cut.

PERENNIALS

1 GALLON UNLESS OTHERWISE NOTED
